CINAHL is the primary database for scholarly research articles in the nursing and allied health literature. The database is an aggregate of almost 900 scientific, medical, and technical journals, in addition to book chapters, dissertations, and some full-text from over 50 publishers and societies. Coverage is from 1984-present.

Use the CINAHL pamphlet for an in depth look at features and options. To maximize your success, always do the following:

- **Sign In** to My EBSCO host. This allows you to save searches and use other features. Create your own username and password.
- **Select Advanced Search** for more Options to refine your search using subject headings, text words, author, and many more.
- **Uncheck** the ‘Suggest Subject Terms’ box.
- **DO NOT CHECK** the Linked Full Text box as it will limit your results to CINAHL journals only (very few). Instead you can access all journals available through the library by using the icon.

Your search results can be printed, emailed, or downloaded.
Another source of full-text, nursing and allied health articles. Just click the Lexis-Nexis link.

Health and Psychosocial Instruments

HAPI provides access to information on measurement instruments (i.e., rating scales, questionnaires, index measures, interview schedules, checklists, coding schemes/manuals, projective techniques, vignettes/scenarios, tests) in the health and psychosocial sciences.

HAPI assists to identify measures needed for research studies, grant proposals, program evaluation, client/patient assessment, class papers/projects, and theses/dissertations.

HAPI does not provide the actual instrument, but does provide analysis, evaluation, and citations to locating a variety of instruments.

PsycINFO covers the scholarly professional and academic literature in psychology and the related disciplines of medicine, psychiatry, nursing, sociology, education, health administration, law, public health, and more.

Original research and journal articles, literature reviews, reports of surveys, case studies, theoretical discussions, bibliographies, and descriptions of tests and apparatus are also included.

Indexed materials are selected from more than 1,300 journals as well as book chapters and books in the English language. Most records have abstracts.

Up-to-date, full-text, medical, health, and wellness information from journals, pamphlets, and a wide variety of authoritative medical sources. Also, links to several pertinent Web sites.

All searches include the PDR Family Guides to: Prescription Drugs; Over-the-Counter Drugs; and Natural Medicines and Healing Therapies.

Provides access to:
- Gale Encyclopedia of Medicine - for diseases and medical conditions
- Mosby's Medical, Nursing, & Allied Health Dictionary
- Gale Encyclopedia of Alternative Medicine - for diseases and medical conditions

Medical & Health Information Directory – search for:
1. Health organizations, agencies, schools
2. Journals, newsletters, publishers and Web sites
3. Hospitals and health care facilities, programs, and special care.

Search for FULL-TEXT articles in three areas:
- Medical News – articles from medical and health news sources covering healthcare
- Medical Journals – articles from medical and health journals covering a wide range of medical topics
